Bareos Reseller

Belgium

At [Hosted Power](#), based in Belgium, we're specialized in Linux cloud services and extreme performance distributed infrastructures. We use a completely worry free managed services approach so you never have to worry about your cloud infrastructure: Our experts keep everything secure, up to date and under control! Don't hesitate to contact us so we can find a solid and cost effective solution for any problems you might be facing today!

[IT3 Consultants](#) is a one-man company based nearby Antwerp, that offers support and consulting around Linux and Open Source software. They are one of the primary authors of Relax-and-Recover (ReaR), an Open Source Linux Disaster Recovery software, which integrates fully with Bareos. IT3 deliver workshops, subscriptions and support contracts around ReaR.

Brazil

[M2 Networks](#), based in Brazil, has emerged from the need for companies to have IT services in a personalized way and closer to their reality. The company specializes in infrastructure and provides services in information security, firewall, backup, and downtime prevention through the active monitoring of critical network devices and services. Works with a wide variety of opensource solutions, which reduces software licensing costs. In addition, they have partnerships with companies that complement their solutions, making M2 Networks a flexible company prepared to provide solutions in several areas of technology and services.

Bolivia

[Cetus Group SRL](#) is an IT integrator company in Bolivia with extensive experience in Linux services, Open Source Solutions and the provision of enterprise hardware. They have several partnerships with brands and companies outside of Bolivia, which has allowed them to constantly expand their range of solutions for their customers and stay on top of technology.

Canada

Cartika

[Cartika](#), based in Toronto, offers services ranging from pure IaaS cloud to fully managed Virtual or Dedicated Servers since 1999. Andrew Rouchotas (CEO): “Utilizing Clusterlogics, a platform built on top of the Bareos based backup solutions, Cartika is able to provide seamless backup and recovery self service management to our customers. Bareos provides a stable, reliable and efficient backup and recovery platform for practically any environment. Cartika also offers a Backup-as-a-Service (BaaS) platform, for customers to backup any of their infrastructure, anywhere - either to their own storage devices or to the cloud. All of these services are offered on top of the Bareos platform and backed by Bareos subscription services.”

Denmark

[Kracon ApS](#) is based in Copenhagen and is a system integrator, offering support and consulting around Linux and Open Source. Areas of work are: linux-servers, backup, networking and custom software development.

France

Since 2002, [Capensis](#) supply durable and reliable solutions around the Linux and Open Source technologies. Their commercial activity is focused on consulting, architecture design, integration, support and formation. They also developed the first Open Source hypervisor, Canopsis. An Open Source project? Contact them so they can find an effective solution tailored to your needs.

Germany

[Dr. Rein backup & recovery help](#) offers solutions and support for data backup and IT security based on Open Source and Linux. This includes flexibly expandable entry-level packages, consulting services, an individual concept (backup, archiving and disaster recovery), implementation using server hardware and support over several months. In addition, backup & recovery help organizes further IT training courses in the Innovationspark Berlin, e.g. on data backup and VPN.

[Bender IT Systems](#) – IT-Consulting in the Ruhr region

Run by Matthias Bender, who has more than 20 years of experience in the deployment, operation and optimization of IT-infrastructures typical for SMEs. Working as an independent consultant since 2012, I support my customers with the implementation and the structuring of IT-environments. I focus on the operational safety and optimize the processes by means of automation-, monitoring- and role-based administration solutions.

What I value about Bareos? As open source software, Bareos has a great range of features and offers a multitude of interfaces for different software products. Thereby Bareos ensures reliable backups and recoveries suitable for everyday use – even beyond different locations.

[Compuwave GmbH](#) is your professional partner for non-standard software distribution. With many years of experience in the distribution environment, the company is a specialist in software procurement, software sales and license consulting. The specialists at Compuwave know exactly what is important and decisive for their partners. Reduce your IT costs with Compuwave and benefit from its flexibility and speed as well as competent and personal support. Compuwave focuses on the D/A/CH area and the French market. The company's extensive software portfolio includes products from more than 1000 software manufacturers worldwide - naturally also non-standard software.

[dass IT GmbH](#) in **Cologne** was founded in 2004 by former senior consultants of Suse Linux AG. dass IT is primarily a system integrator, offering support and consulting around Linux and Open Source.

As a long-standing Bacula partner dass IT used to build Bacula community packages and is now specialized to help you migrate from Bacula or any other Backup tool to Bareos.

[EDNT GmbH](#) provides IT systems and services. Through its subsidiaries, EDNT offers internet service provider solutions for location networking as well as regional and national internet connections. Regionally, all industrial areas have already been connected with glass fibre. EDNT IT-services offer classic IT services in Microsoft and Linux environments. By operating its own data centers, EDNT offers its customers cloud computing, backup, telephony and infrastructure solutions.

[Heinlein Support GmbH](#), based in **Berlin**, offers over 20 years of knowledge and experience in Linux servers and e-mail services. Our customers can benefit from the knowledge we impart during our Linux training courses at the Heinlein Academy or during in-house training sessions. They can also take advantage of our experience in personal consulting services, our attention to detail when hosting customer data on our Linux servers, and our understanding of the Linux operating system when using our appliance and software products.

In addition, Heinlein hosts the Mailserv Conference and the Secure Linux Administration Conference. We have worked with thousands of customers from reputable consumer goods companies, service and industry branches, as well as the public sector place for years and they continue to place their trust in us.

[House of Tools GmbH](#) is a dealer specialised on software tools for administrators and developers. Here you will find a selected range of tools for administration, programming and documentation. House of Tools offers a dedicated area on its website especially for Open Source solutions, in which you are supported competently with the licensing and the completion of appropriate projects. In connection with flexible and cross-platform data backup, House of Tools relies on Bareos.

Bareos Reseller [HSC-Solutions](#) was founded in 2006 and is based in Saxony. As an IT-System house HSC is able to deliver everything from one source: IT-Solutions, IT-Service, IT-Consulting, media and marketing.

By the utilization and developing individual solutions, HSC offers an optimum value to customers. IT-Consulting in combination with professional hardware and software enables faster processes. In cases where standard solutions come to their limits, e.g. enterprise resource planning, HSC is able to create added value. This is conditioned by the use of custom made software solutions.

kesslernetworks.de

[Kessler GmbH](#) based in Raisting in the south of Munich assists as a IT system vendor companies, partners and other service providers in all facets of information technology. Our concepts always focus on open source solutions in terms of our customers, solutions that satisfy the wishes.

High availability and mulit-client capability in infrastructures, innovative virtualisation and container techniques, important log and performance analysis paired with monitoring as well as highly automated installations and configurations give us the opportunity to be your powerful partner for flexible and agile IT.
