## Let's talk: Bareos at it-sa

2019-10-01 17:37

As the IT security trade fair with the largest number of exhibitors worldwide, it-sa attracts IT security experts, developers and executives. For us, security includes backups, and that's what we're really good at: Bareos can backup and restore data from all major operating systems, supporting TLS/SSL encryption as well as LTO hardware encryption and more. Our Open Source backup solution (AGPLv3) is the only one that offers comprehensive multi-level support and subscription services – it's not just about data security, but also about application security.

This year, we're co-exhibitor with Nextcloud, so come and visit us at the booth (Exhibition Centre Nuremberg, [hall 10.1-430](#)). Just click the button [Request contact/appointment](#) to get in touch – we're looking forward to seeing you in Nuremberg!
